

Marianna Rosso

Biomedical Research Data & Project Management Specialist

Details

Im Langacker 19
8304 Wallisellen CH

+41(0)786085177

marianna.rosso3@gmail.com

Skills

Core Competencies

- Project Management
- Stakeholder Management
- Process Improvement
- Data Quality & Governance
- Operational Reporting
- Clinical Research
- Risk Identification & Resolution
- Cross-functional Collaboration

Data & Programming

- FAIR principles
- Data curation
- Data quality assurance
- Scientific databases
- Data cleaning and wrangling
- Statistical analysis
- Data visualisation
- Reproducible workflows

Tools

- R
- SQL
- Python
- Rshiny/Quarto
- Git/GitHub
- Tableau
- VS Code

Employment history

Data Scientist & Project Manager, University Hospital Zurich (Jun 2023 – May 2026)

- Developed data analyses, visualizations, dashboards, and automated reporting workflows for real-world data in ophthalmology.
- Oversaw data quality and compliance processes across multiple research projects and datasets.
- Improved data workflows and internal tools to increase efficiency, reproducibility, and data accessibility.
- Introduced API-based data integration and automated data pipelines to streamline data processing, and reporting.
- Implemented version control and collaborative coding practices using Git to support transparent, reproducible workflows across distributed international teams.

Postdoctoral researcher, Epidemiology, Biostatistics, and Prevention Institute (Nov 2022 – Jan 2026)

- Developed automated data extraction and analysis pipelines to accelerate evidence synthesis and large-scale literature reviews of biomedical and preclinical research.
- Led outreach programs involving researchers and external stakeholders world-wide.
- Generated evidence through systematic reviews, meta-analyses, and data-driven research to support methodological improvements in biomedical science.
- Secured external funding and managed scientific programs, conferences, and international training initiatives.
- Designed and delivered workshops and summer schools on reproducible research, evidence synthesis, data analysis, and open science.
- Designed and developed interactive R Shiny applications, dashboards, websites, presentations, and promotional materials to support data exploration, training, and engagement.
- Taught systematic reviews, meta-analysis, and R; supervised Master's students; developed dashboards, Shiny apps, and scientific communication materials.

Core Team & Social Media Manager, Swiss Reproducibility Network Academy (Jul 2021 – Dec 2023)

- Built a network of researchers through workshops and events
- Managed social media and communication activities

Co-founder & Consultant, SheViz, Self-employed (since Mar 2021)

- Design and deliver training on FAIR data, research integrity, communication and data life-cycle
- Consult on open science workflows and data management strategies

PhD Researcher, Veterinary Public Health Institute, University of Bern (Dec 2018 – June 2022)

- Investigated the reliability and reproducibility of commonly used animal models in research.
- Conducted large-scale systematic reviews and meta-analyses of animal studies.
- Evaluated research quality using risk-of-bias assessments and statistical analyses.
- Published peer-reviewed articles on research methodology and preclinical research practices.
- Presented research findings at international conferences and scientific meetings.
- Taught and mentored Master's students in research methods, evidence synthesis, statistics, and scientific writing.

French - A1

Leadership & engagement

- Led international scientific programmes, including the SR-SAVI Conference (2024) and two international summer schools, with end-to-end responsibility for planning, stakeholder management, teaching, and delivery.
- Contributed to community building and scientific exchange through workshops, training activities, and academic service roles.
- Secured external funding from public and private partners, including CHF 41,500 from UZH Lehrförderung, CHF 3,960 from the UZH Graduate Campus, USD 5,000 from Charles River Laboratories, and CHF 1,000 from the Swiss 3RCC, to support training and collaboration initiatives.
- Strengthened research visibility through communication, outreach, and the translation of complex scientific topics for varied audiences.

Selected publications

Menon JLM - **Rosso M**, et al. (2025): The efficacy of candidate HIV vaccines in non-human primates and humans: a systematic review. In medRxiv

Liesner J, Ineichen BV, **Rosso M** (2025): Use and reporting of systematic review methodology in EFSA Scientific Opinions on animal health and welfare. In Frontiers in Veterinary Science (in print)

Berg I, Harvelid P, Zurrer WE, **Rosso M**, Reich DS, Ineichen BV (2024): Which experimental factors govern successful animal-to-human translation in multiple sclerosis drug development? A systematic review and meta-analysis. In EBioMedicine

Zurrer WE, Cannon AE, Ewing E, Bruschweiler D, Bugajska J, Hild BF, **Rosso M**, et al. (2024): STEED: A data mining tool for automated extraction of experimental parameters and risk of bias items from in vivo publications. In PLOS One

Rosso M, et al (2024): Evidence of HARKing in mouse behavioural tests of anxiety. In Royal Society Open Science

Ineichen BV, **Rosso M**, Macleod MR (2023): From data deluge to publomics: How AI can transform animal research. In Lab Animal

Rosso M, et al. (2022): Reliability of Common Mouse Behavioural Tests of Anxiety: Systematic Review and Meta-Analysis on the Effects of Anxiolytics. In Neuroscience and Biobehavioural Reviews

Education

Master's Degree, University of Bern, Switzerland

Ecology and Evolution, with specialization in Evolutionary Behaviour

Feb 2016 – Sep 2018

Bachelor's Degree, Università degli Studi di Torino, Italy

Biology, with specialization in Ecology

Oct 2011 – Oct 2015
